

Cohort reconstruction and primary structural-proximity analysis

Public yeast phosphosite-to-alanine growth screen · reviewed UniProt annotations · AlphaFold DB monomer models

A Cohort reconstruction

497 point-mutant records
490 source substitutions · 116 genes

487 sequence-matched records
HOG1 T174 resolved · 10 mismatches

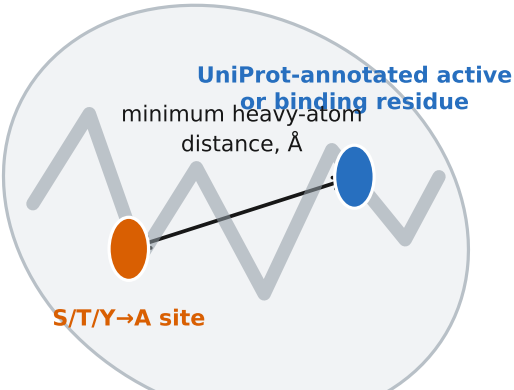

465 sequence-matched records with raw profiles
22 lacked a raw screen profile

427 records after source QC
18 WGS + 20 scar-correlation flags excluded

423 unique eligible substitutions
107 proteins

Primary: 163 substitutions · 48 proteins · 79 screen-positive
Inclusive: 166 substitutions · 50 proteins · 82 screen-positive

B Analysis definition

Predictor: shorter distance
Outcome: direction-agnostic screen-positive label

○ Three target-coincident substitutions excluded from primary; retained at 0 Å in sensitivity

C Primary discrimination
